

ADVANCING ENGLISH LANGUAGE CLASSES THROUGH THE EFFECTIVE USE OF MODERN TECHNOLOGICAL TOOLS.

Toirova Nargiza Isakovna (PhD.) Associate professor

Dadajonova Roziya Asadulloyevna

Master student at FSU

Annotation: *This paper discusses the imperative role of modern technological tools in advancing English language classes. It highlights the critical responsibility of teachers in integrating pedagogical and information-communication technologies to enhance the education system. The paper underscores the significance of interactive methods in promoting independent thinking, analysis, and effective communication among students. It elaborates on the impact of these technologies on the quality of English language education in Uzbekistan, emphasizing the importance of continuous education and modern pedagogical approaches. The effective use of technologies such as email, internet communication, and dynamic games is presented as essential for improving teaching outcomes and fostering students' interest in learning English. The paper concludes by advocating for the intelligent and judicious use of modern interactive methods across all subject areas to elevate the overall quality of education.*

Keywords: *Modern Technological Tools, English Language Education, pedagogical technologies, Information-Communication Technologies, interactive Methods, Education System, Innovative Teaching Methods*

In our country, the organization and scientific-methodological foundations of a continuous education system have been established with the primary aim of preparing competent and highly skilled competitive professionals. The enhancement of teaching methodologies, particularly addressing challenges related to professional competence in pedagogical training, is emphasized. The key responsibility for achieving the set goals in incorporating modern pedagogical

technologies into the educational process lies with the teacher who serves as its manager. It is imperative for the teacher to elevate their preparedness level to effectively introduce new pedagogical technologies and the core information-communication technologies into the education system.

The teacher, as the manager of this process, must prioritize elevating their preparedness level to ensure the successful integration of new pedagogical technologies and core information-communication technologies into the educational system. Expanding the scope of implementing new pedagogical and information technologies, applying practical experiences in various fields, setting clear goals for each subject, and implementing them are vital. Additionally, it is crucial to provide each student with the necessary resources, such as textbooks and learning materials, in electronic formats. Attaining a sufficient level of preparedness in scientific and methodological work, as well as achieving effective integration in educational and pedagogical processes, and ensuring the educational system is adequately equipped with information tools for communication networks are considered essential tasks.

In English language classes, the method and tools for enhancing the effectiveness of modern pedagogical technologies are available. The interactive method, focusing on increasing the activity between students and teachers, contributes to the development of students' knowledge by promoting independent thinking, analysis, drawing conclusions, expressing their ideas, and protecting them in a well-founded manner. The term "interactive" comes from the English word "interact," where "inter" means mutual and "act" refers to movement. In a broader sense, "interactive" signifies mutual movement. Currently, one of the primary trends in improving teaching methods is the implementation of interactive teaching and educational methods. The use of interactive methods results in improved critical thinking, analysis, conclusion drawing, and the development of effective communication and debating skills.

The English language teacher can significantly contribute to raising the level of students' knowledge and effectiveness. Proficiency in the English

language is now one of the fundamental requirements for higher education. Learning the English language, which holds a prominent place among international communication languages, is given special attention in the education system of the Republic of Uzbekistan. The ongoing development of new information-communication and pedagogical technologies based on scientific research is raising the quality of teaching English to a new level. These technologies not only reflect their impact on the education system but also enhance the quality of teaching English. Learning English with the help of modern technologies contributes to the formation of language skills. Ensuring the continuous education system's effectiveness in training English language specialists, providing them with comprehensive knowledge, and utilizing various teaching methods, including the methodology of teaching additional texts, are crucial. Additionally, it is essential to utilize other effective teaching methods and styles.

In conclusion, the integration of modern technologies into the education system is imperative for achieving successful results in English language education. The use of contemporary information and communication technologies is considered one of the most effective methods for teaching and learning English. It facilitates communication with English speakers through the internet, enhances writing skills through email correspondence, and provides opportunities for interactive communication. Utilizing modern communication technologies is crucial for increasing interest in learning English, improving teaching effectiveness, and creating innovation in the educational process. Various innovative methods of educational technologies are available today, and incorporating them into the education system enhances the quality of education. Using a variety of interactive methods, incorporating role-playing and dynamic games in English language classes also contributes to the students' increased interest in learning and improving their language proficiency. In summary, all subject areas, including English language studies, benefit from the judicious and intelligent use of modern methods and interactive methods, improving the quality

of education without compromising students' global awareness and knowledge development.
