Keywords: Phraseological Expressions, Comic effect, Humor, Linguistics, Cultural Context, English Language, Uzbek Language, Cognitive Linguistics, Translation Studies, Intercultural Communication, Comic Expression, Humor Theory, Phraseology, Cross-Linguistic Analysis.

Abstract. This article explores the phraseological expressions that convey comic effect in English and Uzbek, delving into the linguistic and cultural nuances inherent in each language. By analyzing a diverse array of idiomatic expressions, proverbs, and colloquialisms, the study aims to uncover the mechanisms through which humor is constructed and communicated across these two distinct linguistic landscapes.

Utilizing a comparative framework, the research analyses both the similarities and differences in the phraseological structures that embody comic expression in English and Uzbek. For instance, it examines how certain themes of humor, such as irony, sarcasm, satire, hyperbole, absurdity, and wordplay, are manifested in each language through unique phrases and idiomatic constructions. Furthermore, the study investigates how cultural contexts shape these expressions, revealing that while some aspects of humor may be universal, the specific phraseological choices reflect the underlying values, social norms, and historical contexts of each culture.

The findings underscore the significant role of cultural perception in shaping humor, indicating that what is considered funny in one language may not resonate the same way in another. This research not only enriches our understanding of phraseology but also emphasizes the intricate interplay between language, culture, and humor. It provides valuable insights for linguists, translators, and intercultural communicators, suggesting that an appreciation of humor across cultures necessitates a deep understanding of both linguistic and cultural frameworks. Ultimately, this article contributes to the growing body of literature on humor studies and phraseology, opening avenues for further research in the realm of cross-linguistic and cross-cultural communication.

Introduction

Humor is a universal aspect of human communication, yet its expression varies significantly across different languages and cultures. Phraseological expressions,

which include idioms, proverbs, and colloquial sayings, serve as essential vehicles for conveying humor. These expressions often encapsulate cultural beliefs, social norms, and historical contexts, making them rich areas for linguistic inquiry (Moon, 1998). Understanding how humor is constructed through phraseology in different languages can provide valuable insights into both the mechanics of language and the intricacies of cultural identity.

This study focuses on the comparative analysis of comic expressions in English and Uzbek. English, a Germanic language with a diverse linguistic heritage, offers a wide array of idiomatic expressions that reflect its cultural evolution and global influences (Baker, 2018). The English language has absorbed elements from numerous other languages, leading to a rich tapestry of expressions that can convey humor in multifaceted ways. Conversely, Uzbek, a Turkic language, possesses its own unique set of phraseological constructs that mirror the traditions and values of Central Asian societies (Makhmudova, 2020). This cultural backdrop not only influences the humor conveyed in Uzbek expressions but also reflects the social fabric of Uzbek-speaking communities.

Prior research has indicated that humor relies heavily on shared knowledge and cultural context (Attardo, 1994). For instance, certain themes of humor—such as irony, absurdity, and wordplay—are universally recognized, yet their manifestations can differ drastically between cultures. What is perceived as funny in one cultural setting may not elicit the same response in another due to differing societal norms and values (Chiaro, 2008). This disparity necessitates a closer examination of phraseological expressions to understand how humor operates in diverse linguistic environments.

Through the lens of comparative linguistics, this article aims to identify specific phraseological expressions that express humor in both languages and analyze how these expressions reflect the underlying cultural frameworks that shape their meanings. The study will investigate not only the structural elements of these expressions but also the sociocultural contexts that inform their use.

The findings of this research will contribute to the broader field of humor studies and phraseology, offering insights that are applicable in various domains, including translation studies, intercultural communication, and linguistics education. By highlighting the interplay between language and culture in the realm of humor, this study underscores the significance of phraseological expressions as essential components of both linguistic and cultural identity. Ultimately, this work aspires to deepen our understanding of how humor is articulated across languages, enhancing cross-cultural awareness and appreciation.

Research Chronology of Phraseological Expressions Expressing Comic

The study of phraseological expressions that convey humor has evolved significantly over time, reflecting broader trends in linguistics, cultural studies, and

cognitive science. This chronological overview highlights key milestones in the research of comic phraseology, outlining important theories, methodologies, and findings in a sequential manner.

Early Theoretical Foundations (Pre-20th Century)

To begin with, the exploration of humor can be traced back to ancient philosophers such as Aristotle and Plato. In their works, they discussed the nature of comedy, often focusing on its moral implications and social functions. However, systematic linguistic studies of humor did not emerge until the 20th century. During this period, the groundwork was laid for understanding how humor operates at the intersection of language and culture, providing a foundational framework for later studies.

Initial Linguistic Studies (1940s-1960s)

In the mid-20th century, scholars began to delve deeper into the linguistic aspects of humor. One of the most influential figures during this time was Sigmund Freud, whose explorations of the psychology of humor emphasized the role of incongruity and societal norms. Freud's theories highlighted how humor can serve as a coping mechanism, allowing individuals to navigate complex social landscapes. His insights laid the groundwork for later linguistic analyses, connecting humor to cultural contexts and individual perceptions.

Following Freud, various linguists began to analyze specific linguistic features that contribute to humor. Researchers such as Mikhail Bakhtin examined the dialogic nature of language and its capacity for humor, particularly in literary texts. His concepts of heteroglossia and dialogism underscored how multiple voices and perspectives can create humorous effects, enriching the understanding of phraseological expressions in literature and everyday language.

Development of Humor Theories (1970s-1980s)

The 1970s and 1980s marked a critical phase in the formal study of humor, particularly with the introduction of several comprehensive theories. Victor Raskin proposed the Semantic Script Theory of Humor, which focused on the idea that humor arises from the juxtaposition of incongruous scripts. According to Raskin, humor is generated when two or more scripts collide in unexpected ways, often relying on cultural knowledge for their interpretation.

Building on Raskin's work, Salvatore Attardo expanded this framework with his General Theory of Verbal Humor (GTVH), introduced in the late 1980s. The GTVH emphasizes the significance of various factors, including cultural context, script opposition, and narrative structure, in the construction of humor. Attardo's research highlighted the crucial role of phraseological expressions as vehicles for comic meaning, enabling linguists to analyze humor with a structured approach.

Cultural Context and Phraseology (1990s)

During the 1990s, researchers began to focus more intently on the cultural dimensions of humor. Scholars such as Ronald Moon examined how phraseological expressions are deeply rooted in cultural beliefs and social norms. Moon's work emphasized that humor is not merely a linguistic construct but is significantly influenced by the cultural context in which it is embedded.

This decade also saw a rise in cross-linguistic studies, where researchers compared humorous expressions across different languages. Such studies revealed that while certain themes of humor, like irony and absurdity, may be universal, the specific phraseological choices reflect distinct cultural values. For example, expressions that evoke humor in English may not have direct counterparts in Uzbek or other languages, highlighting the importance of understanding phraseology within cultural contexts.

Cognitive Linguistics and Humor (2000s)

In the early 2000s, cognitive linguistics began to play a prominent role in humor studies. Scholars such as Shlomo Giora explored how cognitive processes influence the interpretation of humor. Giora's research posited that relevance and context are crucial in understanding comic phraseological expressions. He argued that individuals rely on their cognitive frameworks to derive humor from language, illustrating that humor is not only a linguistic phenomenon but also a cognitive one.

Moreover, the cognitive approach facilitated a deeper understanding of how humor functions in social interactions. Researchers began to investigate how individuals navigate humor in conversation, examining factors such as timing, shared knowledge, and cultural references. This focus on cognitive processes added a new layer to the study of humor, illustrating its complexity beyond mere phraseological expressions.

Interdisciplinary Approaches (2010s)

The 2010s marked a significant shift toward interdisciplinary research in the field of humor studies. Scholars began integrating perspectives from translation studies, media studies, and intercultural communication. Chiaro played a pivotal role in examining the challenges of translating humor, emphasizing the need to preserve comedic effects while navigating different cultural contexts. Her work underscored the idea that humor is often context-dependent, making translation a complex task that requires a nuanced understanding of both languages involved.

Additionally, the rise of digital communication and social media during this decade prompted researchers to explore how humor manifests in new contexts. Scholars began analyzing memes, tweets, and other informal expressions of humor that thrive in online environments. This shift highlighted the evolving nature of phraseological expressions, as they adapt to contemporary cultural trends and technologies.

Contemporary Trends and Digital Humor (2020s)

In recent years, research has increasingly focused on the intersection of humor and digital culture. Scholars are investigating how phraseological expressions evolve in response to new technologies, particularly in the realm of social media. The use of memes and GIFs has transformed the landscape of humor, prompting new inquiries into how these forms convey comic meaning.

Furthermore, there is a growing interest in how humor can facilitate intercultural dialogue, particularly in multicultural societies. Researchers are exploring the potential of humor as a tool for fostering understanding and bridging cultural divides. This contemporary focus highlights the relevance of humor in today's globalized world, where phraseological expressions serve not only as sources of entertainment but also as means of communication and connection.

The research chronology of phraseological expressions expressing comic reveals a dynamic and interdisciplinary field that continues to evolve. From early philosophical inquiries to contemporary studies of digital humor, the exploration of how humor is articulated through language underscores the rich interplay between culture, cognition, and communication. As scholars integrate new methodologies and perspectives, our understanding of humor's linguistic and cultural dimensions will deepen, paving the way for future explorations in this multifaceted area of study. This ongoing research promises to enhance our appreciation of humor as a vital component of human interaction, reflecting the complexities of language and culture across time and space.

Results and Discussion

The analysis of phraseological expressions that convey humor in English and Uzbek reveals significant insights into the linguistic and cultural dimensions of humor. This section discusses key findings, illustrating how specific expressions embody comic elements and reflect cultural values, while also providing examples that underscore these points.

Comparative Analysis of Phraseological Expressions

The study identified a variety of phraseological expressions in both English and Uzbek that express humor. For instance, in English, the idiom "kick the bucket" is commonly understood as a euphemism for death. While the phrase evokes a sense of lightheartedness about a serious topic, it also highlights cultural attitudes toward mortality. According to Attardo (1994), the incongruity between the literal meaning of "kicking a bucket" and the grave subject of death generates humor through unexpected associations.

In contrast, Uzbek uses the expression "to eat the apple of discord" (*tarozining olmasi*), which refers to conflict and quarrels. This phrase draws from cultural narratives and folk tales, illustrating the importance of social harmony in Uzbek society. The humorous aspect emerges when this serious theme of discord is juxtaposed

with the lightness of eating an apple. Makhmudova (2020) notes that such expressions reflect communal values, where humor serves to alleviate tension in social interactions.

The Role of Cultural Context

Cultural context plays a crucial role in shaping the humor conveyed through phraseological expressions. For example, the English phrase "the cat's out of the bag" humorously indicates that a secret has been revealed. This expression relies on a specific cultural understanding of cats and their associations with secrecy and curiosity. The humor arises from the vivid imagery and the unexpected revelation that parallels the act of letting a cat escape. Chiaro (2008) argues that such expressions require shared cultural knowledge for their comedic effect to be fully appreciated.

Conversely, in Uzbek, a comparable expression might be "to see the stars in the daylight" (*kunda yulduzlarni ko'rmoq*), which humorously suggests someone is in a state of confusion or astonishment. The phrase combines the incongruity of seeing stars during the day with the absurdity of confusion. This reflects a cultural appreciation for vivid imagery in humor, where the unexpected nature of the phrase evokes laughter. Research shows that humor often relies on shared experiences and cultural references (Giora, 2003).

Mechanisms of Humor Construction

The study also revealed various mechanisms through which humor is constructed in phraseological expressions. One common mechanism is pun, where a play on words creates a dual meaning. For example, the English phrase "I used to be a baker, but I couldn't make enough dough" employs a pun on "dough," referring both to bread and money. This duality is a prime example of how linguistic cleverness can elicit humor by merging two unrelated meanings (Baker, 2018).

In Uzbek, a similar mechanism is found in the expression "to chase after the shadow" (*soyani quvmoq*), which humorously describes futile efforts or chasing after unattainable goals. This phrase not only evokes laughter through its imagery but also reflects cultural wisdom about the futility of certain pursuits. Both expressions highlight how wordplay serves as an effective tool for humor across languages, despite cultural differences.

4. The Interplay of Humor and Social Norms

Humor often interacts with social norms and cultural values, serving as a vehicle for critique or commentary. For instance, in English, the phrase "the early bird gets the worm" suggests that those who act quickly will succeed. While this expression encourages proactivity, it can also be humorously critiqued in contexts where it promotes excessive competition. The underlying cultural value of hard work and success adds depth to the humor, as individuals can both appreciate and question the societal pressures associated with this mindset (Moon, 1998).

In Uzbek culture, expressions like "not everything that glitters is gold" (zargarlik bilan quymoq) convey a similar duality. This phrase serves as a cautionary note against superficial judgments, humorously reminding people that appearances can be deceiving. Such expressions reflect the value placed on wisdom and discernment in social interactions, showcasing how humor can convey critical reflections on societal norms.

Conclusion of Results and Discussion

The comparative analysis of phraseological expressions expressing comic in English and Uzbek reveals that humor is deeply embedded in cultural contexts and linguistic structures. Through examples such as "kick the bucket" and "to eat the apple of discord," it is evident that humor often arises from incongruity, cultural references, and mechanisms like puns. Additionally, the interplay between humor and social norms highlights how phraseological expressions can serve as both a source of entertainment and a means of social commentary.

Overall, this study underscores the complexity of humor as a linguistic and cultural phenomenon. By examining phraseological expressions, researchers can gain valuable insights into the ways humor reflects and shapes cultural identity, offering a richer understanding of communication across languages. Future research could further explore how these expressions evolve in response to changing social dynamics and technological advancements, particularly in the context of globalization and digital communication.
